

◆ HOW TO USE THE DUAL TIME FUNCTION [FE(46P)]

You can see the time for two different time zones, one for the city you are in and another for any other city, using the rotating bezel and the 24-hour hand.

- (1) First be sure that the watch is showing the correct time.
- (2) Get the time difference for the city you want to know the time of. (See Comparison table of standard times.)
- (3) When the time difference is a negative number, turn the bezel clockwise to that number of hours. When the time difference is positive, turn the bezel counterclockwise to that number of hours.
- (4) The number on the bezel where the 24-hour hand is pointing will be the time in the city you selected.

Example: When you want to know the time in London while you are in Japan London time is 9 hours behind Japan. Therefore, turn the rotating bezel clockwise 9 hours. The hours and minutes shown by the watch hands is the time in Japan. The number on the bezel where the 24-hour hand is pointing is the time in London. (Japan time: 10:09 a.m., London time: 01:09 a.m.)

Example: When you want to know the time in Japan while you are in London Japan time is 9 hours ahead of the time in London. Therefore, turn the rotating bezel counterclockwise 9 hours. The hours and minutes shown by the watch hands is the time in London. The number on the bezel where the 24-hour hand is pointing is the time in Japan. (London time: 10:09 a.m., Japan time 07:09 p.m.)
